Title	Content	Pg.No.
	Declaration by Research Scholar–Originality of Research Work	I
	Certificate of Supervisor	II
	Thesis Approval Form	III
	Declaration by Research Scholar – Submission of Thesis	IV
	Acknowledgement	V
	Contents	VII
	Abstract	X
Chapter : 1	Synthesis, Characterization and Anti-Cancer Activity of Thiophene Derivative	
	1.1. Introduction	1
	1.1.1. Synthetic methods for substituted thiophene scaffold and its biological significance	3
	1.2. Result and discussion	8
	1.2.1. Optimizing of the reaction conditions	8
	1.2.2. Physicochemical Properties	10
	1.2.3. Anticancer activity of synthesized molecules	11
	1.2.4. <i>In vitro</i> Anticancer Screening at 5 dose Full NCI 60 cell Panel	15
	1.3. Conclusion	17
	1.4. Experimental Section	18
	1.4.1. Anticancer activity	28
	1.5. Spectral Data	29
Chapter: 2	Synthesis, Characterization and Anti-Cancer Activity of Indole Derivative	
	2.1. Introduction	73
	2.1.1. Synthetic methods for substituted thiophene scaffold and its biological significance.	75
	2.2. Result and Discussion	79
	2.2.1. Optimizing reaction conditions	80

2.2.2. Physicochemical Properties	82
2.2.3. Anti-cancer screening	83
2.3. Conclusion	87
2.4. Experimental Section	88
2.4.1. Protocol for the Anti-cancer Screening	95
2.5. Spectral data	96
Chapter : 3	Synthesis, <i>In-Vitro</i> Antimicrobial Evaluation, ADMET Properties and Molecular Docking Studies of Novel Thiazole Derivatives
3.1. Introduction	125
3.1.1. Synthetic methods for substituted thiophene scaffold and its biological significance	127
3.2. Results and Discussion	131
3.2.1. Optimizing reaction conditions	132
3.2.2. Physicochemical characteristics	134
3.2.3. Molecular Docking	135
3.2.4. Antimicrobial activity of synthesized compound	138
3.2.5. Prediction of the ADMET properties	140
3.3. Conclusion	142
3.4. Experimental Section	143
3.4.1. Experimental protocol of molecular docking study	149
3.5. Spectral Data	150
Chapter : 4	Synthesis, <i>In-Vitro</i> Antimalarial Evaluation, ADMET Properties and Molecular Docking Studies of Novel Thiazolo[3,2-<i>a</i>]pyrimidine Derivatives
4.1. Introduction	165
4.1.1. Synthetic methods for substituted thiophene scaffold and its biological significance	167
4.2. Results and Discussion	170
4.2.1. Optimizing of the reaction conditions	171
4.2.2. Physicochemical characteristics	173

4.2.3. <i>In vitro</i> antimalarial screening	174
4.2.4. Molecular Docking	176
4.2.5. Prediction of the ADMET properties	178
4.3. Conclusion	180
4.4. Experimental Section	181
4.4.1. Antimalarial activity of synthesized compound	189
4.4.2. Experimental protocol of molecular docking study	190
4.5. Spectral Data	191
Chapter : 5	Synthesis, <i>In-Vitro</i> Anti-Diabetic Activity, ADMET Properties and Molecular Docking Studies of Novel Thiazole Derivative
5.1. Introduction	211
5.1.1. Synthetic methods for substituted thiazole scaffold and its biological significance.	213
5.2. Results and Discussion	216
5.2.1. Optimizing reaction conditions	217
5.2.2. Physicochemical Properties	219
5.2.3. Molecular Docking with α -amylase	220
5.2.4. <i>In vitro</i> α -amylase inhibition.	223
5.2.5. Prediction of the ADMET properties	224
5.3. Conclusion	226
5.4. Experimental Section	227
5.4.1. Experimental protocol of molecular docking study	234
5.4.2. <i>In vitro</i> α -amylase inhibition	234
5.5. Spectral Data	235
